

Earth and Beyond

Q. How does night and day form?

A. The Earth spins on its own axis so when one side is facing the sun it's day time, and the other side is night time.

Q. How many planets are there in the solar system?

A. There are 9 planets in the solar system (including Earth)

Q. Do we spin around the Sun or does the Sun spin around us?

A. We spin around the Sun, the Sun doesn't spin around us.

Q. Which planet out of the solar system is the hottest?

Venus

Q. How long does it take for:
A. The Moon to orbit the Earth?
B. The Earth to orbit the Sun?

A. 28 Days
B. 365 and a quarter days.

Q. How many countries is there on Earth?

A. About 195!

Q. What was the first man called who landed on the Moon?

A. Neil Armstrong

Q. What was the first planet to be discovered?

A. Neptune and Pluto

Q. Why does we find that the sun at day moves from one side to another?

A. Because we spin on our own axis and the sun faces us then doesn't.
